Network Security Challenge 03 - Easy

To protect his network from intruders Nolan has set up a firewall. Connect to the server to receive the firewall description and the task.

Exercise 3–1 is hosted at netsec.net.in.tum.de at port 20103.
We recommend connecting to the server using netcat (man nc) first.
It is advisable to have a Linux system at hand for the challenges. Our servers and clients are written in python.
